Control your home with your voice

All Shelly devices are compatible with Amazon Echo and Google Home. Please see our step-by-step guide on: https://shelly.cloud/compatibility/Alexa https://shelly.cloud/compatibility/Assistant

MOBILE APPLICATION FOR MANAGEMENT OF SHELLY®

Shelly Cloud gives you opportunity to control and adjust all Shelly® Devices from anywhere in the world. You only need an internet connection and our mobile application, installed on your smartphone or tablet.

To install the application please visit Google Play (Android - fig. 3) or App Store (iOS - fig. 4) and install the Shelly Cloud app.

Introduction to Shelly®
Shelly® is a family of innovative Devices, which allow remote control of electric appliances through mobile phone, PC or home automation system. Shelly® uses Wi-Fi to connect to the devices controlling it. They can be in the same WiFi network or they can use remote access (through the Internet).

Shelly® may work standalone, without being managed by a home automation controller, in the local WiFi network, as well as through a cloud service, from everywhere the User has Internet access.

Shelly® has an integrated web server, through which the User may adjust, control and monitor the Device. Shelly® has two WiFi modes - access Point (AP) and Client mode (CM). To operate in Client Mode, a WiFi router must be located within the range of the Device. Shelly® devices can communicate directly with other WiFi-devices through HTTP protocol.

An API can be provided by the Manufacturer. Shelly® devices may be available for monitor and control even if the User is outside the range of the local WiFi network, as long as the WiFi router is connected to the Internet. The cloud function could be used, which is activated through the web server of the Device or through the settings in the Shelly Cloud mobile application.

The User can register and access Shelly Cloud, using either Android or iOS mobile applications, or any internet browser and the web site: https://my.Shelly.cloud/

Installation Instructions

**CAUTION!** Danger of electrocution. The mounting/installation of the Device should be done by a qualified person (electrician).

**CAUTION!** Danger of electrocution. Even when the Device is turned off, it is possible to have voltage across its clamps. Every change in the connection of the clamps has to be done after ensuring all local power is powered off/disconnected.

**CAUTION!** Do not connect the Device to appliances exceeding the given max load

**CAUTION!** Connect the Device only in the way shown in these instructions. Any other method could cause damage and/or injury.

**CAUTION!** Before beginning the installation please read the accompanying documentation carefully and completely. Failure to follow recommended procedures could lead to malfunction, danger to your life or violation of the law. Allerco Robotics is not responsible for any loss or damage in case of incorrect installation or operation of this Device.

**CAUTION!** Use the Device only with power grid and appliances which comply with all applicable regulations. Short circuit in the power grid or any appliance connected to the Device may damage the Device.

**RECOMMENDATION:** The Device may be connected to and may control electric circuits and appliances only if they comply with the respective standards and safety norms.

**RECOMMENDATION:** The Device may be connected to solid single-core cables with increased heat resistance to insulation not less than PVC 110°C.

Initial Inclusion
Before installing/mounting the Device ensure that the grid is powered off (turned down breakers).

Connect the Relay to the power grid and install it in the console behind the switch/power socket following the scheme that suits the desired purpose:

1. Connecting to the power grid with power supply 110-240V AC - fig. 1
2. Connecting to the power grid with power supply 24-60V DC - fig. 2

For more information about the Bridge, please visit: http://shelly-api-docs.shelly.cloud/shelly-family-overview or contact us at: developers@shelly.cloud

You may choose if you want to use Shelly with the Shelly Cloud mobile application and Shelly Cloud service. You can also familiarize yourself with the instructions for Management and Control through the embedded Web interface.

If using Android: your phone/tablet will automatically scan and include all new Shelly Devices in the WiFi network that you are connected to.

If using iOS: you will see the following screen:

Press the home button of your iPhone/iPad/iPod. Open Settings » WiFi and see if you can find the WiFi network created by Shelly, e.g. shelly1pm-35FADB.

Upon successful Device Inclusion to the WiFi network you will see the following pop-up:
Step 4:
Approximately 30 seconds after discovery of any new devices on the local WiFi network, a list will be displayed by default in the ‘Discovered Devices’ room.

Step 5:
Enter Discovered Devices and choose the Device you want to include in your account.

Step 6:
Enter a name for the Device (in the Device Name field). Choose a Route in which the Device has been positioned. You can choose an icon and add a picture to make it easier to recognize. Press ‘Save Device’.

Step 7:
To enable connection to the Shelly Cloud service for remote control and monitoring of the Device, press “YES” on the following pop-up.

The Embedded Web Interface

Even without the mobile app, Shelly can be set and controlled through a browser and WiFi connection of a mobile phone, tablet or PC.

**ABBREVIATIONS USED:**

- **Shelly-ID** – the unique name of the Device. It consists of 6 or more characters. It may include numbers and letters, for example 35FA58
- **SSID** – the name of the WiFi network, created by the Device, for example Shelly1pm-35FA58
- **Access Point (AP)** – the mode in which the Device creates its own WiFi connection point with the respective name (SSID).
- **Client Mode (CM)** – the mode in which the Device is connected to another WiFi network.

**Installation/Initial inclusion**

**Step 1**
Install Shelly to the power grid following the schemes described above and place it into the console. After turning the power on Shelly will create its own WiFi network (AP).

**WARNING:** If you do not see an active WiFi network with SSID like Shelly1pm-35FA58, reset the Device.

If the Device has been powered on, you have to restart it by powering it off and on again. After turning the power on, you have one minute to press 5 consecutive times the button/switch connected to SW. You have to hear the Relay trigger itself. After the trigger sound, Shelly should return to AP Mode. If you have physical access to the device, you can press and hold the Reset button for 10 seconds, which is placed on the back of the device. Shelly should return to AP Mode. If not, please repeat or contact our customer support at: support@shelly.cloud

**Step 2**
When Shelly has created an own WiFi network (own AP), with name (SSID) such as Shelly1pm-35FA58 Connect to it with your phone, tablet or PC.

**Step 3**
Type 192.168.33.1 into the address field of your browser to load the web interface of Shelly.

**General - Home Page**

This is the home page of the embedded web interface. Here you will see information about:

- Current electrical consumption
- Current state (on/off)
- Power Button
- Connection to Cloud
- Present time
- Settings

**Settings**

**Power On Default Mode**
This sets the default output state when Shelly is powered.

- **ON**: Configure Shelly to turn ON, when it has power.
- **OFF**: Configure Shelly to turn OFF, when it has power.
- **Restore Last Mode**: Configure Shelly to return to last state it was in, when it has power.

**Firmware Update**
Update the firmware of Shelly, when a new version is released.

**Time Zone and Geo-location**
Enable or Disable the automatic detection of Time Zone and Geo-location.

**Factory Reset**
Return Shelly to its factory default settings.

**Device Reboot**: Reboots the Device.
